Maryland Shorelines Online

Maryland Shorelines Online is a coastal hazards Web portal developed by the Center for GIS at Towson University (CGIS) and the Maryland Department of Natural Resources Coastal Zone Management unit to centralize information and data about shoreline and coastal hazards management in Maryland.

Offering distribution capabilities, Internet mapping tools, information about technical and financial assistance, and educational information, Maryland Shorelines Online helps coastal managers, planners, educators, and the public maintain the rich cultural and natural resources associated with the State's coastal and shoreline areas.

Interactive mapping tools enable users to view, display, and integrate physical, environmental, land use, and shoreline-specific data collected from various Maryland agencies. Metadata included with each data set can also be viewed within the mapping application.

Visit Maryland Shorelines Online at <http://shorelines.dnr.state.md.us/default.asp>.
